

Analyse the photograph of your chosen research location. Write a list of questions that you could ask about this place. Think about the deeper geography represented in that place and the concepts that underpin them. Equally, think about what the photograph does not show.

Then complete the key (right) and highlight each question with the correct colour(s)

	A question with meaningful geography
	A question which could be answered with primary data
	A question that could be answered with secondary data
	A question that could be analysed using a statistical test
	The question that excites or interests me the most

- Qn .....
- Qn .....

Look at the pattern of highlighting - are there any questions which now stand out as good research questions to take further? How might you have to change the wording of these questions to improve them?
