Weathering Survey

The Rahn Weathering Index

Score	Observations
1	No evidence of weathering.
2	Slightly weathered. Corners and joints have lost a degree of angularity. Some slight discolouration.
3	Moderately weathered. The surface is rough to touch and there is evidence of pitting.
4	Badly weathered. High levels of discolouration and a very rough surface to touch.
5	Very badly weathered. Complete flattening of any protruding features.
6	Extremely weathered. Rock surface is peeling, or segments and blocks are coming away from the surface.
