

A landscape survey is a way of quickly observing and recording the features present in the landscape. It serves as a good way of consciously registering certain features which might otherwise be overlooked and makes a good foundation for ideas about future data collection in the area.

The list of features is far from exhaustive and space is included to add personal observations and features which are highly specific to certain places.

Location: .....

Grid Reference: .....

### Land Use

- derelict
- parkland / gardens
- utilities
- land in transition
- place of worship
- community space
- heritage
