

You will need:

- Laminator and gloss pouch
- Stiff card
- Graph paper (1cm²) this can be found online as a free download
- Double sided tape
- Scissors or guillotine
- Fastening of choice (such as rubber bands)
- Glue

Instructions:

- 1. Cut a $10 \text{cm} \times 10 \text{cm}$ square of graph paper and a $12 \text{cm} \times 12 \text{cm}$ square of stiff card.
- 2. Glue the graph paper so it is centred on one side of the card. Laminate the card so both graph paper and card are completely sealed.
- 3. Stick double sided tape to the card such that it covers the whole of the $10 \text{cm} \times 10 \text{cm}$ square of graph paper. It should extend off the side of the card. Do not peal off the plastic backing to the tape yet.
- 4. Attach a fastening to the card (such as rubber bands) so that it can be fixed in a manner suitable for the data collection site.
- 5. To the sticky side of the overhanging tabs of tape, stick a piece of scrap card (in this example a laminate off-cut has been used). This will provide a pull tab which will make it easier to remove the tape and reuse the card at another date.
- 6. Once the card is positioned in the location of the data collection, remove the plastic backing from the strips of tape.
